

Anidoodle

Animate doodles with your face

ANIMATE your DOODLES

Anidoodle allows you to create your own 2D character from scratch and animate it just by moving your face in front of your device.

The app uses the incredible TrueDepth camera system of iPhone X to mirror your expressions onto your doodle.

DRAW

Select the feature you want to complete and start drawing different expressions.

No drawing skills are required. The resulting Anidoodle will be awesome anyway!

ANIMATE AND RECORD

To animate your character, just place your phone about 25-50 cm away from your face.

You can record videos of your animated character and share them with your friends!
